

JobNotes was founded in 2014 after years of planning and implementation. Steven Greenwald and Jim Plona, with the help of Live-Tech, developed the company for use in our own service orientated business. Having run a large service based business for years and dealing with the cumbersome paperwork flow from field workers, to office staff, for billing and job costing we knew a change had to be made. This cloud based solution was born using customized forms, navigation and mapping programs, and mobile devices for real time reporting.

Since the implementation of JobNotes into our organization, we have saved a tremendous amount of money not to mention the relieved stress allowing us to work more efficiently.

Our commitment to our customers, and the ability to provide them with exceptional service has grown increasingly stronger since the inception of JobNotes. In light of this, we decided to develop this program and market it to other service providers so their firms can realize the same benefits that we have!

What differentiates us from the competition?

- Single platform for business mobility management
- Financial strength of JobNotes allowing continued innovation
- Central console to manage devices, apps, and data
- Secure integration with existing business systems
- Support center available 24-7, 365 days a year
- Automated compliance tool with defined user parameters
- Seamless integration for system users

What We Do:

Simplify Enterprise Mobility

JobNotes, powered by Livetech, is a leader in mobility solutions across every device, every operating system and every mobile deployment. Our mobility management program platform integrates with existing systems and allows you to manage all devices, regardless of type, platform or ownership, from one central console.

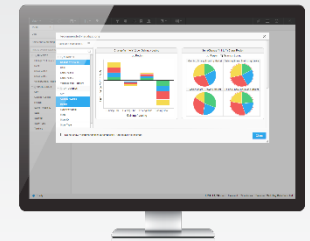

Built from the ground up on a true platform

One Platform

One Code Base

One Central Console

BRING YOUR OWN DEVICE (BYOD)

By implementing a BYOD program, your business can operate with the use of existing devices either company or employee supplied. Companies can use their resources to ensure this data is protected and secure. Jobnotes provides a flexible platform for policy enforcement and distribution of customer information and apps based on device ownership.

- **Device Flexibility**
JobNotes supports all major support platforms, allowing you to use your existing phones, tablets, notepads, and computers. Your firm will also have flexibility with your future device purchasing plans.
- **Enabling Devices**
Jobnotes allows for easy enabling of existing employee or company owned devices. Profiles, applications, and accessible content configure automatically based on the controls your company puts into place.
- **Information Sharing Risk**
JobNotes allows you to avoid the risks that are presented with employee or company owned devices in accessing company information. A terms of use agreement should be put into place to inform users that the data is the property of the company, and any use of that data for reasons other company use will be cause for disciplinary action.
- **Employee Privacy**
JobNotes allows for separation of personal and corporate data on devices and can customize privacy policies based on device ownership. Use policies to prevent collection of GPS location, personal email and personal user information on employee owned devices.

EVERY MOBILE DEVICE

Manage any mobile device type including smart phones, tablets, desktops, and printers.

EVERY MOBILE OPERATING SYSTEM

Support multiple operating systems including Apple IOS, Mac, Windows, and Android across your organization.

EVERY MOBILE DEPLOYMENT

Enable deployments with multiple device ownership models, including corporate, employee-owned, line of business, and shared.
